

Selecting the “Desktop” level from the pop-up folder menu or clicking the “Volumes” button displays the names of all the disks in drives connected to your computer (Figure 7B). Double-click on the disk you want to use and you’ll immediately move to that disk’s main directory. The “Desktop” or “Volumes” level lets you switch to any other disk you want to use in seconds.

Note!

In some Standard File dialogs, the “Volumes” button may read “Disk” or “Drive.” It serves the same function regardless of its name.

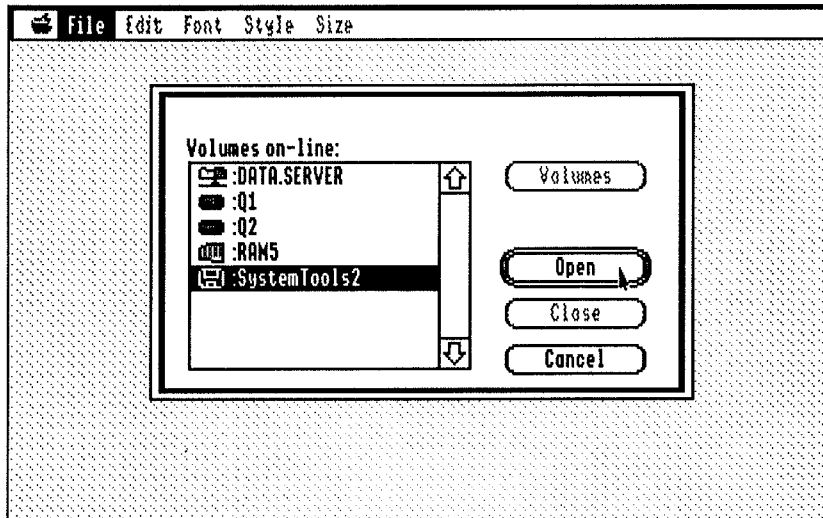

Figure 7B—Volume Selection (in Standard Open)

Some applications add other buttons to the Standard File dialog. These buttons’ functions differ from program to program. Consider Teach’s Import File dialog—note the four radio buttons at the bottom of the dialog that tell Teach what kinds of files you want to see in the dialog. But the basic elements of the Standard File dialog are still there at the foundation.

Shortcut

The following shortcuts are available in most Standard File dialogs:

- | | |
|--------------------|--|
| ⌘-Tab | Move to next disk (like going to Volumes and selecting it) |
| ⌘-Period | Cancel (same as clicking Cancel button) |
| ⌘-Up Arrow, Escape | Move to parent folder (same as Close button) |
| ⌘-Down Arrow, ⌘-O | Open folder or document (same as Open button) |
| ⌘-Escape, ⌘-D | Jumps to the Volume list (Disks) |
| Insert 3.5" disk | Display that disk’s main directory |
